</tbody>
</table>

**KEY** | E=excellent, G=good, F=fair (test before using), P=poor, not recommended

### Resistance to Specific Chemicals

**General Notes**
- Ratings are based on a combination of visual observations, and mechanical strength test results.
- All testing was done at 77°F +/- 10°F. Performance ratings are not necessarily valid outside of that temperature range.
- Test ratings are based on white material; non-white panels could show additional visual changes.
- Test was run per Crane Composites product development procedure #8125: surface chemical resistance. In this procedure the chemicals are exposed to the surface of the panel for 7 days.

**Rating Key**
- E (Excellent): Suitable for use in most exposure conditions.
- G (Good): Possibly suitable for use; testing under specific exposure conditions is suggested.
- F (Fair): Possibly unsuitable for use; testing under specific exposure conditions is recommended.
- P (Poor): Unsuitable for use in most exposure conditions.
- C: Color change
- NT: Not tested

**Stain Resistance to Food + Miscellaneous Products**

**KEY**
- Unaffected = wipes off easily with damp cloth and mild soap; no color or surface change
- Superficial = stain removes easily with water and/or mild abrasive
- Considerable = stain not completely removed.

**TESTING INFORMATION**
- ASTM D2299 | test stain resistance of applied coating
- ASTM D1308 | test stain resistance of a product’s natural surface

A global leading provider of resilient wall and ceiling coverings. Kemlite® was established in 1954 and the company changed names to Crane Composites in 2007. Crane Composites is headquartered in Channahon, IL and all our products are manufactured in the United States. We work with hundreds of distributors, ensuring our products are easily accessible and readily available to our customers.
